It is now intimated from Washing ton that Dr. Wiley of the department of agriculture must follow Pinchot, not because he is not a valuable public servant, but because vested inter ests have succeeded in having morinfluence with the administration than its own expert investigators, and their demand and the appointment by Romevelt of a referee board of conported the use of benzoate of sode as a preservative after it had been conof the country, and who now, it is said, will support the use of sulphur in pre-

"Come here a minute, Johnnie," said the little boy's father, as Johnnie made an effort to slip through the room while keeping the left side of his face away from his observant parent. "I want to have a look at that bump over your eye."

Johnnie halted reluctantly and slowly turned around.

"That's good," commented his father, who had received advanced information from Johnnie's mother as soon as he reached home that evening. "I'm glad it doesn't hurt. When I was your size and got a bump like that it used to hurt, I remember. How did you get it."

Johnnie developed a tremendous in-"The afraid I missed that one," ad-"The what is, don't you, pa? Didn't other kids have it when you went to school?"

Johnnie developed a tremendous interest in the red and blue cabbage roses that ornamented the rug. He looked up once to see whether storm signals were flying in his father's countenance, but the barometer was not working.

At current prices wheat will bring to the farmer for the year \$725,000,000, with \$625,000,000 for hay, \$400,000,000 for oats, \$212,000,000 for potatoes, and \$100,000,000 for tobacco. These stupendous figures cannot be grasped by the ordinary intelligence. While the gold production of the year was the greatest in all this country's history, it fell a few millions short of the value of the tobacco crop, and was immeasurably exceeded by that of the wheat, cotton and corn crops. The production of all the cereals combined was greater in quantity for 1909 than for any preceding year except 1906, which greater in quantity for 1909 than for any preceding year except 1906, which broke several records in the bulk of the output. The higher prices now, however, give the farmer much more money for his work in 1909 than he obtained in 1906 or any other year.

The aggregate value of the country's farm products for 1909 would go much more than half way toward buying cut the entire railway system of the country, with the accumulations of protesty of all sorts which have been gettrated through the years. The money which goes into the farmers' pockets for their labors for the twelve months amounts to a fourteenth of the value of all the country's property, real and personal; and the wealth of the United States, it must be remembered, equals that of our two nearest rivals combined—Great Britain and Germany. The Child Labor Committee.

Reforms do not come of themselves. Abuses are not corrected automatically. Last year twenty-eight states made important amendments to their school and child labor laws. If it were possible to trace all these efforts to their uitimate source, it would probably be found that the initial impulse in most cases came from the national child labor committee, which has its headquarters at 105 East Twenty-second street, New York city. This committee, organized in 1904 and incorporated in 1907, has done a noble work in the investigation of child labor conditions, making public the facts in a series of pamphilets of which No. 107 has just been issued.
